

Amazon S3 Lifecycle Rule – Hands-on

Practical implementation and verification of an S3 object lifecycle transition rule

1. Lifecycle Rule Configuration

Created a lifecycle rule named **my_first_lifecycle_rule**, applied it to all objects in the bucket, and selected the action to transition current object versions between storage classes.

The screenshot displays the AWS Management Console interface for creating a new lifecycle rule. The breadcrumb navigation at the top indicates the path: Amazon S3 > Buckets > s3-storage-class-devi-demo-01 > Lifecycle configuration > Create lifecycle rule. The page title is 'Create lifecycle rule' with an 'Info' link.

Lifecycle rule configuration

Lifecycle rule name

my_first_lifecycle_rule
Up to 255 characters

Choose a rule scope

☐ Limit the scope of this rule using one or more filters

☒ Apply to all objects in the bucket

⚠ Apply to all objects in the bucket
If you want the rule to apply to specific objects, you must use a filter to identify those objects. Choose "Limit the scope of this rule using one or more filters". [Learn more](#)

☒ I acknowledge that this rule will apply to all objects in the bucket.

Lifecycle rule actions
Choose the actions you want this rule to perform.

☒ **Transition current versions of objects between storage classes**
This action will move current versions.

☐ **Transition noncurrent versions of objects between storage classes**
This action will move noncurrent versions.

☐ **Expire current versions of objects**

☐ **Permanently delete noncurrent versions of objects**

☐ **Delete expired object delete markers or incomplete multipart uploads**
These actions are not supported when filtering by object tags or object size.

The footer of the console shows 'CloudShell', 'Feedback', 'Console Mobile App', and copyright information for Amazon Web Services, Inc. or its affiliates, along with links for 'Privacy', 'Terms', and 'Cookie preferences'.

2. Storage Class Transition Configuration

Configured the lifecycle transition so that objects move to **S3 Standard-IA** after **30 days** and then to **S3 Intelligent-Tiering** after **100 days**. The review section confirms the complete transition flow.

Transition current versions of objects between storage classes

Choose transitions to move current versions of objects between storage classes based on your use case scenario and performance access requirements. These transitions start from when the objects are created and are consecutively applied. [Learn more](#)

Create rule

3. Lifecycle Rule Successfully Created

The lifecycle rule was successfully added and its status is shown as **Enabled**. The rule scope is the entire bucket.

Lifecycle configuration

The rule "my_first_lifecycle_rule" has been successfully added and the lifecycle configuration has been updated

It may take some time for the configuration to be updated. Refresh the lifecycle rules list if changes to the configuration aren't displayed.

Lifecycle configuration

To manage your objects so that they are stored cost effectively throughout their lifecycle, configure their lifecycle. A lifecycle configuration is a set of rules that define actions that Amazon S3 applies to a group of objects. Lifecycle rules run once per day.

Default minimum object size for transitions

All storage classes 128K

Actions

Create lifecycle rule

Use lifecycle rules to define actions you want Amazon S3 to take during an object's lifetime such as transitioning objects to another storage class, archiving them, or deleting them after a specified period of time. [Learn more](#)

4. Object Available in the S3 Bucket

The bucket contains the test object **coffee.jpg**. The enabled lifecycle rule will evaluate eligible objects according to the configured transition schedule.
