

Amazon S3 Bucket Policy Hands-On

01 - Bucket Permissions (Default)

The screenshot shows the AWS Management Console interface for the 'devi-bucket-01' S3 bucket. The breadcrumb navigation at the top indicates the path: Amazon S3 > Buckets > devi-bucket-01. The 'Permissions' tab is selected, showing the 'Permissions overview' section. Below this, the 'Block public access (bucket settings)' section is visible, with a status of 'On' and an 'Edit' button. A message at the bottom states: 'Public access is blocked because Block Public Access settings are turned on for this bucket'. The footer of the console shows the year 2026 and various links like CloudShell, Feedback, and Console Mobile App.

Block public access (bucket settings) Edit

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Block all public access
On

Bucket policy Edit Delete

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. [Learn more](#)

Public access is blocked because Block Public Access settings are turned on for this bucket
To determine which settings are turned on, check your Block Public Access settings for this bucket. Learn more about [using Amazon S3 Block Public Access](#)

}

```

Object Ownership

Control ownership of objects written to this bucket from other AWS accounts and the use of access control lists (ACLs). Object ownership determines who can specify access to objects.

Object Ownership
Bucket owner enforced

ACLs are disabled. All objects in this bucket are owned by this account. Access to this bucket and its objects is specified using only policies.
