Explored the Snowball Edge job-creation workflow and reviewed the available job types: Import into Amazon S3, Export from Amazon S3, and Local Compute and Storage. No job was completed and no device was ordered.

The screenshot displays the AWS Snow Family console interface for creating a new job. The breadcrumb navigation shows 'Snow family' > 'Create new job'. A sidebar on the left lists the steps: Step 1 (Job type), Step 2 (Compute and storage), Step 3 (Features and options), Step 4 (Security, shipping, and notification preferences), and Step 5 (Job summary). - ☒ **Import into Amazon S3** [Info](#)
AWS will ship an empty device to you for storage and compute workloads. You'll transfer your data onto it, and ship it back. After AWS gets it, your data will be moved.
- ☐ **Export from Amazon S3** [Info](#)
Choose what data you want to export from your S3 buckets for storage and compute workloads. AWS will load that data onto a device and ship it to you. When you're done ship the device back for erasing.
- ☐ **Local compute and storage only** [Info](#)
Perform local compute and storage workloads without transferring data. You can order multiple devices in a cluster for increased durability and storage capacity.

Note:
The device provisioning process may take up to 4 weeks before your device is ready to ship.
